New Strategy for GWP: 2020 Vision

This seminar is **YOUR** opportunity to contribute to developing **GWP's Global Strategy for 2014–2019**. The six years to 2020 will be crucial to growing GWP's role as a network, a partnership, and an intergovernmental organisation, contributing to building a water secure world.

*GWP Side Event at World Water Week 2013 in Stockholm
Tuesday 3 September 2013, 09:00–12:30, Room K11*

We will discuss the global context shaping GWP's vision and mission and the role of our Partners:

- The financial and economic shifts in public sector priorities including the expanding food and energy needs in Asia and Africa, the growth of emerging cities and towns with a need for water infrastructure and supply, and the involvement of the private sector.
- Extreme events such as floods and droughts costing countries hundreds of billions of dollars each year.
- Supporting countries in applying integrated approaches to water resources management and development as the best way forward for sustainability.
- Mainstreaming gender through all three strategic goals of the organisation.
- Developing an effective strategy for youth engagement at all levels of the Global Water Partnership.
